

7/11/2018

For Immediate Release Ryson has just released their largest Spiral Conveyor.

The new Ryson Wide Trak Spirals can handle a variety of load sizes, big and small with their 30" or 36" wide slats. They are ideal for warehousing and order picking operations.

The Wide Trak Spirals can handle double the weight capacity of our standard spirals, and can provide an elevation change of up to 50 feet with only one drive.

The Ryson proprietary slat belt enables a low rolling friction operation without any sliding movements or wear strips. The load carrying capacity of the belt is up to 75 lbs per linear foot. This enables the spirals to start and stop fully loaded and can run at speeds up to 200 fpm. The slats are overlapping and provide a reliable and safe conveying surface.

The Wide Trak Spirals can optionally be configured to allow loads to enter or exit the spirals at several intermediate elevations.

The Ryson value proposition is to deliver products with a low total cost of ownership. Ryson Spiral Conveyors need less floor space than conventional conveyors and are also faster and more reliable than any elevator or lift.

Ryson will be exhibiting at Pack Expo International October 14-17, 2018 McCormick Place, Chicago, Illinois, Booth 4915. For more information about Ryson's Vertical Conveying Solutions, visit www.ryson.com.
