NALBACH ENGINEERING OFFERS MODIFIED ATMOSPHERE PACKAGING SYSTEM (MAPS)

Countryside, IL (USA). May, 2018. Nalbach Engineering Company has introduced a new and innovative Modified Atmosphere Packaging System (MAPS) for the food and beverage industry, the Nalbach SLX (Shelf Life eXtension) System.

The Nalbach SLX is a modified atmosphere packaging (MAP) system that efficiently flushes a package with an inert gas such as nitrogen to displace the oxygen within the package. This process gives products such as coffee a much longer shelf life, retaining their distinctive aromas and flavors. The SLX is capable of reducing the residual oxygen (RO2) level to as low as less than 1% depending on the application.

The Nalbach SLX rail system is designed with a high level of sanitation in mind. The SLX design eliminates bacteria harboring screens within the gas flow system and the rails can be easily disassembled and then reassembled for thorough cleaning. The Nalbach SLX rail system has also been designed with fewer parts and has no consumables eliminating the cost and time associated with routine replacement of parts.

The Nalbach SLX is highly efficient in its use of purging gasses with the SLX "Crossflow Purge Chamber" used to purge the product on-the-fly as it enters the filling system. The Crossflow Purge Chamber eliminates the need to pre-purge the product as well as the surge/feed hopper prior to entering the filler.

The Nalbach SLX Cooled Gases system reduces the temperature of the gas used to flush a package. It is a highly efficient system that cools the gas immediately before it enters the container and requires no additional energy to cool the gas. The colder gases tend to remain in the package and not dissipate into the surrounding atmosphere reducing the amount of gas required.

All, new and existing, Nalbach fillers manufactured since 1956 can be fitted with the SLX gassing system.

Nalbach can also integrate its SLX technology with fillers made by other manufacturers as well as upstream and downstream equipment for a complete, performance guaranteed system.

This new line of products and services is available worldwide through Nalbach's direct sales and manufacturers reps.

Patents Pending

About Nalbach Engineering Company

Founded in 1945, Nalbach Engineering Company has earned its dominant reputation for quality and performance in the design and manufacture of a complete line of filling equipment for powders, granulars, flakes and aerosols. In addition, Nalbach Engineering manufactures plastic bottle unscramblers, bottle orienters and offers turnkey packaging lines as well as system integration services. A member of PMMI since 1958, Nalbach Engineering has developed equipment for a widely diverse client roster of Blue Chip companies and has installed systems in 45 countries around the globe.
