NALBACH ENGINEERING OFFERS NEW GENERATION FILLER FOR HIGH SPEED FILLING OF POWDERED AND GRANULATED PRODUCTS.

Countryside, IL (USA). July, 2018. Nalbach Engineering's NECOFLO-G6 filler runs faster, cleaner, provides superior product settling and fill accuracy.

The NECOFLO-G6 is a new generation filler designed for clean, accurate, high speed filling of expensive fine powders or granules such as instant coffee and soluble tea.

The NECOFLO-G6 has been designed from the ground up with many new innovative features.

The NECOFLO-G6 valve uses controlled valve actuation to be gentle on the product with no compacting or degradation of the product's integrity.

The NECOFLO-G6 container seal is designed with a long life polymer material that accommodates a wide range of container height variation.

The NECOFLO-G6 vent system is a bi-flow, self cleaning design, with a large area port size, significantly reducing the possibility of clogging and is easily accessible. The system vents into the fill head minimizing product loss and insuring system cleanliness.

The NECOFLO-G6 vibration system is a recipe driven system that provides multiple, independently controlled, vibration zones to insure optimal product settling for each container/product.

The NECOFLO-G6 incorporates a "Lift Table" for each container eliminating pressures and stresses on the container as it moves through the filling

The NECOFLO-G6 incorporates a closed loop gas containment system providing the most efficient modified atmosphere packaging (or MAP) system of any filler on the market today.

This new product is available worldwide through Nalbach's direct sales and manufacturers reps.
